

Ten Seven, Interactive.

Premium Services As a value-added reseller of pair Networks' world class web hosting, Ten Seven, Interactive is proud to be able to provide the first line of support to you for your web solution, while pair Networks takes care of the network and servers that make your site run. This means that you get personal attention, and support, as needed, without having to worry about being able to contact a large hosting company with your issues.

Domain Name Management :-

Ten Seven will keep track of your domain name, renew it before it expires, purchase new domains for you and configure DNS records on your behalf. There is no need for you to know what a registrar is, how to configure your DNS servers, how to forward email, what it means to park a domain, nor anything technical related to owning your own domain. Ten Seven, Interactive takes care of it for you.

\$ 36 per year, per domain – includes domain registration

Web Site + Email Hosting :-

Your website might require a single page as a placeholder for a few months while you build your presence, or may be a large content management based solution that requires a database backend, or dedicated server. Ten Seven is able to provide any hosting plan that pair Networks makes available, with additional support and maintenance – each estimate that Ten Seven generates is customized to your needs.

Simple hosting from **\$6** per month to developer hosting for **\$50** per month. High-volume hosting starts at **\$75** per month.

A solution that best matches your needs will be recommended to you – please call or write to us for more information.

Web Site Monitoring :-

Website uptime is critical to the success of your online endeavors. As a result, Ten Seven provides monitoring of your website for uptime, and reacts to any service interruption without your involvement at all.

\$ 9 per website, per month checked every 5 minutes with email alerts as to the status of the site, and monthly uptime reports.

Web Site Remote Mirror Backup :-

Having an up-to-date copy of your website, with any changes made to your live production site, visitor logs, forum postings, blog comments and any other database related activity is paramount to ensuring your continued success. With this service, Ten Seven offers regularly scheduled backups, to a remote location, over and above the backup provided by pair Networks. This backup is made over an encrypted connection, incrementally, and securely – it results in an exact copy of your site's data mirrored on another remote server, as often as you deem necessary.

\$ 10 per website, per month on a nightly schedule for not more than 1GB of bandwidth use per month.

\$ 20 per website, per month on an hourly schedule for not more than 2GB of bandwidth use per month.
